

DIGESTIVE PROBLEMS

Vomiting in dogs can be caused by several things and can be a sign of a number of severe problems. It can also be a sign of something as simple as an empty stomach. Vomiting a yellow bile in the night or early morning is very common among Westies. You can often resolve this simply by giving the dog a bedtime treat containing fiber so that his tummy will have something in it overnight. (A nice biscuit, a piece of stew beef, or some other treat should work.) If this does not help, contact your vet about vomiting. He/She can determine what is wrong and how to best treat it.
